{ UNITED INCHES = LENGTH + WIDTH }

- Use united inches to find the amount of footage used to make the frame. Round up to the nearest whole number on both length and width if there is a fraction.
- Multiply the footage by the price per foot (chop, join, or length) to find your frame cost.

Example: 12 x 16 frame = 28 United Inches

If the moulding is 1 1/2" wide, the footage required to make that frame would be approximately 6 feet.
